ADVANCED PITCHING STATS*	
TBF: Total Batters Faced Total Batters Faced measures the total number of plate appearances hitters have made against him.	
HR/9: Home Run Rate Home Rune Rate measures how many home runs a pitcher averages over nine innings. Of course, not many pitchers throw nine innings all at once anymore, but this is a way of standardizing the statistic so it's on an easy-to-understand scale like many other pitcher statistics which are scaled to 27 outs.	
K% & BB%: Strikeout Rate and Walk Rate Strikeout rate (K%) and walk rate (BB%) measure how often a pitcher walks or strikes out a player per plate appearance. They're measured in percentage form, so it's easy to compare between players and years.	
AVG: Batting Average Batting average is the rate of hits per at bat, calculated as hits/at bats.	
BABIP: Batting Average on Balls In Play Batting Average on Balls In Play (BABIP) measures how often a ball in play goes for a hit. Typically around 30% of all balls in play fall for hits, but there are several variables that can affect BABIP rates for individual players, such as defense, luck, and talent level. Hitters have more control over their BABIP than pitchers do.	
LOB%: Left On Base Percentage Left on Base Percentage (LOB%) measures the percentage of base runners that a pitcher strands on base over the course of a season. This stat does not use the left on base numbers reported in box scores, but instead is calculated using a pitcher's actual hits, walks, and runs allowed results.	
xFIP: Expected Fielding Independent Pitching Fielding Independent Pitching measures what a player's ERA would look like over a given period of time if the pitcher were to have experienced league average results on balls in play and league average timing. xFIP Normalizes a pitcher's home runs allowed based on their fly ball rate rather than simply using the raw number of home runs allowed. (Due to no constant in Minor League Baseball, the xFIP statistic is aproximate)

*ADVANCED HITTING STATS GLOSSARY									
PA: Plate Appearances Plate Appearances are the total number of times a hitter completes a turn batting.									
K% & BB%: Strikeout Rate and Walk Rate Strikeout rate (K%) and walk rate (BB%) measure how often a position player walks or strikes out per plate appearance. They're measured in percentage form, so it's easy to compare between players and years.									
ISO: Isolated Power Isolated Power (ISO) is a measure of a hitter's raw power. Or, to look at it another way, it measures how good a player is at hitting for extra bases. The simplest way to calculate ISO is to subtract a player's Batting Average from their Slugging Percentage, which leaves us with a measure of just a player's extra bases per at bat.									
BABIP: Batting Average on Balls In Play Batting Average on Balls In Play (BABIP) measures how many of a batter's balls in play go for hits. Affected greatly by defense and luck, BABIP can dramatically affect a hitter's batting average. If a large number of a batter's balls in play go for hits, that can boost their batting average quite high. Similarly, if a large number of balls in play get caught, it can reduce a player's total offensive value.									
wOBA: Weighted On-Base Average Weighted On-Base Average combines all the different aspects of hitting into one metric, weighting each of them in proportion to their actual run value. While batting average, on-base percentage, and slugging percentage fall short in accuracy and scope, wOBA measures and captures offensive value more accurately and comprehensively. (Due to no constant in minor league baseball, the wOBA statistic is approximate).									
wRC+: Weighted Runs Created Plus Weighted Runs Created Plus measures the total number of runs a player contributes to their team. The formula accounts for a player's ability to get on base, their total number of bases, and their baserunning. The Plus version of the stat is park and league adjusted.
